

1. Master Data Tables

1.1 Project (xr_project)

(Note: This table already exists in the environment and does not need to be created. It is included here for relationship reference only. Its true lookup target is its GUID, which standardizes here under the name Project ID.)

Display Name	Data Type	Possible Values / Logical Details
Project ID	Unique Identifier	(Primary Key) GUID

1.2 Verticals & Budget Head (xr_verticalbudgethead)

A unified hierarchical table that manages Verticals, Budget Heads, and Sub Budget Heads.

Display Name	Data Type	Possible Values / Logical Details
xr_verticalbudgetheadid	Unique Identifier	(Primary Key) GUID
Vertical Budget Number	Auto-number	(Unique Text Identifier)
Category Name	Single Line of Text	e.g., "Channel Partner", "Telecallers", "Hostess"
Category Type	Choice	Vertical , Budget Head , Sub Budget Head
Parent Category	Lookup	Related to Verticals & Budget Head table (Self-referencing for hierarchy)

1.3 Project Budget Allocation (xr_projectbudget)

Stores the allocated budget for each Project + Category (Budget Head) combination, sourced from the existing Project_Wise_Budget SharePoint list.

Display Name	Data Type	Possible Values / Logical Details
xr_projectbudgetid	Unique Identifier	(Primary Key) GUID
Allocation Number	Auto-number	(Unique Text Identifier) PB-{SEQNUM}

Display Name	Data Type	Possible Values / Logical Details
Project	Lookup (xr_project)	References xr_project.Project ID (GUID); ProjectName may be shown in the UI as the label
Vertical	Lookup (xr_verticalbudgethead)	Filtered to Category Type = Vertical
Budget Head	Lookup (xr_verticalbudgethead)	Filtered to children of selected Vertical
Region	Choice	e.g. MMR
Budget (Allocated Amount)	Currency	Base sanctioned amount
Pricing	Currency	Base pricing
Approved Amount	Currency	Officially approved spend
Tax	Decimal Number	Tax percentage (e.g. 18%)
Consumption	Currency	Amount utilized
Balance (In Rs)	Calculated (Currency)	Native Calculation: Budget - Consumption
Consumption Percentage	Calculated (Decimal)	Native Calculation: (Consumption / Budget) * 100

(Note: Formatting columns like *BudgetFormatted* , as well as standard system fields like *Created* , *Modified* , *access* are natively handled by Dataverse and removed to avoid redundancy).

2. Vendor Onboarding (xr_vendoronboarding)

Maintains the centralized database of all onboarded vendors based on the onboarding form.

Display Name	Data Type	Possible Values / Logical Details
xr_vendoronboardingid	Unique Identifier	(Primary Key) GUID
Onboarding Number	Auto-number	(Unique Text Identifier)

Display Name	Data Type	Possible Values / Logical Details
Company Name	Single Line of Text	
Approval Status	Choice	Pending , Approved , Rejected
Vertical	Lookup (xr_verticalbudgethead)	Filtered to Category Type = Vertical
Budget Head	Lookup (xr_verticalbudgethead)	Filtered to children of selected Vertical
Sub Budget Head	Lookup (xr_verticalbudgethead)	Filtered to children of selected Budget Head (Optional)
Email ID	Single Line of Text	Format: Email (Regex validated in UI)
Contact Name	Single Line of Text	
Phone Number	Single Line of Text	10 digits
Payment Credit Period	Single Line of Text	No. of Days representation
GSTIN	Single Line of Text	15 characters
PAN	Single Line of Text	Extracted from GSTIN (chars 3 to 12) or 10 chars
Billing Address	Multiple Lines of Text	
Billing Street 2	Single Line of Text	
Billing City	Single Line of Text	
Billing State	Single Line of Text	
Billing Code	Single Line of Text	

3. Vendor Evaluation - Header (xr_vendorevaluation)

The parent evaluation record. Holds the overall context (project, category, decision) and links to up to 3 vendor detail records.

Display Name	Data Type	Possible Values / Logical Details
xr_vendorevaluationid	Unique Identifier	(Primary Key) GUID
Evaluation Number	Auto-number	(Unique Text Identifier) e.g., EVAL - {SEQNUM}
Project	Lookup (xr_project)	
Vertical	Lookup (xr_verticalbudgethead)	Filtered to Category Type = Vertical
Budget Head	Lookup (xr_verticalbudgethead)	Filtered to children of selected Vertical
Sub Budget Head	Lookup (xr_verticalbudgethead)	Filtered to children of Budget Head (if available)
Vendor 1 Details	Lookup (xr_vendorevaldetail)	Links to the evaluation detail record for Vendor 1
Vendor 2 Details	Lookup (xr_vendorevaldetail)	Links to the evaluation detail record for Vendor 2
Vendor 3 Details	Lookup (xr_vendorevaldetail)	Links to the evaluation detail record for Vendor 3
Preferred Vendor	Choice	Vendor 1 , Vendor 2 , Vendor 3
Evaluated vendor	Lookup (xr_vendoronboarding)	Stores the final evaluated vendor's GUID (xr_vendoronboardingid)
Reason for Preference	Multiple Lines of Text	

4. Vendor Evaluation - Detail (xr_vendorevaldetail)

A child record holding the complete metric profile for a single vendor within an evaluation. Each Evaluation Header links to up to 3 of these records.

Display Name	Data Type	Possible Values / Logical Details
xr_vendorevaldetailid	Unique Identifier	(Primary Key) GUID

Display Name	Data Type	Possible Values / Logical Details
Evaluation Detail Number	Auto-number	(Unique Text Identifier) e.g., EVALD-{SEQNUM}
Vendor	Lookup (xr_vendoronboarding)	The vendor being assessed in this record
Vertical	Lookup (xr_verticalbudgethead)	(Hidden) Used to drive UI Business Rule logic
Budget Head	Lookup (xr_verticalbudgethead)	(Hidden) Used to drive UI Business Rule logic
Remarks	Multiple Lines of Text	
Rating	Choice	1 , 2 , 3 , 4 , 5
Pricing	Single Line of Text	String-based pricing format
Payment Term	Choice	15 days post submission , 30 days post submission , 45 days post submission , 50% in advance rest post submission , 100% in advance
Discount	Single Line of Text	
Management Fee	Single Line of Text	
SMS Delivery Ratio	Single Line of Text	text percentages
RCS Delivery Ratio	Single Line of Text	text percentages
Call for connected Ratio	Single Line of Text	
Re-credits	Choice	Yes , No
META Availability	Choice	Yes , No
Quality	Choice	1 , 2 , 3 , 4 , 5
Quality of Callers	Choice	1 , 2 , 3 , 4 , 5
Quality of Product	Choice	1 , 2 , 3 , 4 , 5

Display Name	Data Type	Possible Values / Logical Details
Quality of Work/Service	Single Line of Text	
Quality of previous Work	Choice	1 , 2 , 3 , 4 , 5
Finesse	Choice	1 , 2 , 3 , 4 , 5
Previous Clients	Single Line of Text	
Previous Clients Performance Rating	Choice	1 , 2 , 3 , 4 , 5
Previous Clients Performance quality	Choice	1 , 2 , 3 , 4 , 5
Industry Expertise	Choice	1 , 2 , 3 , 4 , 5
Industry Experience	Single Line of Text	
Technical Experience	Choice	1 , 2 , 3 , 4 , 5
Category Expertise	Choice	1 , 2 , 3 , 4 , 5
Scale of Budget Handled	Choice	upto 30 lakhs , 30 lakhs to 70 lakhs , 70 lakhs to 1 crore , 1 crore & above
Timeline of delivery	Choice	1 , 2 , 3 , 4 , 5
On Time Delivery	Choice	1 , 2 , 3 , 4 , 5
On Time Delivery capability	Choice	1 , 2 , 3 , 4 , 5
Product Delivery	Single Line of Text	
Product	Single Line of Text	
Product Name	Single Line of Text	
Location	Single Line of Text	
Reach Location	Single Line of Text	Specific location target
Availability	Choice	Yes , No

Display Name	Data Type	Possible Values / Logical Details
Site Availability	Single Line of Text	
Station Popularity	Single Line of Text	
Cancellation Policy	Choice	Yes , No

5. Budget / Expense Requisition (xr_budgetrequisition)

Consolidates standard Expense Requisitions and specific Vendor Adjustments.

Display Name	Data Type	Possible Values / Logical Details
xr_budgetrequisitionid	Unique Identifier	(Primary Key) GUID
Requisition Number	Auto-number	(Unique Text Identifier) REQ-{SEQNUM}
Approval Status	Choice	Pending , Approved , Rejected
Type	Choice	Expense Requisition , Budget Adjustment
Project	Lookup (xr_project)	
Vertical	Lookup (xr_verticalbudgethead)	
Budget Head	Lookup (xr_verticalbudgethead)	(Also used for Event Type: CP Meet , JBP Meet , CP Success Meet)
Sub Budget Head	Lookup (xr_verticalbudgethead)	(Also used for Sub Events)
Vendor Evaluation	Lookup (xr_vendorevaluation)	Must store the approved vendor evaluation GUID for the same Project, Vertical, Budget Head, and Sub Budget Head context

Display Name	Data Type	Possible Values / Logical Details
Start Date	Date Only	
End Date	Date Only	
Requested Parameter	Decimal Number	Amount or Quantity
Description	Multiple Lines of Text	"Kindly elaborate on the requirement"
Period <i>(Hidden Field - Conditionally Visible)</i>	Choice	Daily , Monthly

6. Budget Operation Request (xr_budgetoperation)

Handles structural shifts, additions, or deductions of budget across hierarchical verticals.

Display Name	Data Type	Possible Values / Logical Details
xr_budgetoperationid	Unique Identifier	(Primary Key) GUID
Operation Number	Auto-number	(Unique Text Identifier) OP-{SEQNUM}
Approval Status	Choice	Pending , Approved , Rejected
Project	Lookup (xr_project)	
Budget Operation	Choice	Budget Shifting , Budget Addition , Budget Deduction
Amount	Currency	Float/Decimal value

6.1 From Context

Applicable for Budget Shifting, Budget Addition, and Budget Deduction.

Display Name	Data Type	Possible Values / Logical Details
From Vertical	Lookup (xr_verticalbudgethead)	
From Budget Head	Lookup (xr_verticalbudgethead)	
From Sub Budget Head	Lookup (xr_verticalbudgethead)	Optional selection

6.2 To Context

Applicable only for Budget Shifting.

Display Name	Data Type	Possible Values / Logical Details
To Vertical	Lookup (xr_verticalbudgethead)	
To Budget Head	Lookup (xr_verticalbudgethead)	
To Sub Budget Head	Lookup (xr_verticalbudgethead)	Optional selection

7. Initial Setup & Configuration Guide

To properly set up the Chanakya 2.0 app, follow this step-by-step implementation guide. The setup must be executed in the exact sequence provided below to properly structure the Dataverse environment.

Phase 1: Create New Tables

Create the following custom Dataverse tables. Ensure you include all their respective columns, data types, choices, and lookup relationships as defined in sections 1 to 6 above:

1. **xr_verticalbudgethead** (Verticals & Budget Head) - The unified hierarchy.
2. **xr_projectbudget** (Project Budget Allocation) - Financial ledger for sanctioned amounts.
3. **xr_vendoronboarding** (Vendor Onboarding) - Vendor master database.
4. **xr_vendorevaluation** (Vendor Evaluation - Header) - Evaluation request records.

5. **xr_vendorevaldetail** (Vendor Evaluation - Detail) - Vendor assessment metrics.
6. **xr_budgetrequisition** (Budget / Expense Requisition) - Standard expense request and budgeting requests.
7. **xr_budgetoperation** (Budget Operation Request) - Used exclusively for structural shifts, additions, or deductions.

Phase 2: Modify Existing Tables

Update the existing foundation tables to integrate with the new approval logic:

1. **Project (xr_project)**
 - **Add Column:** **CPT Approval** (Lookup to User/Team). Crucial for routing vendor onboardings to the correct Central Procurement users.
 - **Validate Column:** Ensure **Strategy Approval** (Lookup to User/Team) is present and correctly mapped so routing for evaluations and expenses works correctly.
2. **Team Onboarding Table** (*Auxiliary / Reference*)
 - **Update Choices:** Make sure the **Job Profile** choice column accurately reflects the individual verticals. This will later map a user to their Vertical POC security role during provisioning.

Phase 3: Setup Security Roles

With the architecture ready, create and configure the specific Dataverse security roles to enforce data and execution limits per persona:

1. **Strategy Manager Role:**
 - **Access:** High-level app access. Responsible for financial decision-making, accepting evaluations, and approving requisitions or budget operations.
 - **Assignment:** Pre-assigned to users listed in the **Strategy Approval** mappings in the **Project** table.
2. **Custom Vertical POC Roles:**
 - **Access:** Create dedicated roles for every Job Profile (e.g., *Vertical POC - Marketing* or *Vertical POC - Sales*). These roles strict access so the POC only interacts with data from their vertical.
 - **Assignment:** Dynamically assigned when onboarding users from the **Team Onboarding** table.
3. **CPT (Central Procurement) Role:**
 - **Access:** Given dedicated privileges to approve/reject new Vendor Onboardings and create Budget Operations.

- **Assignment:** Assigned manually or dynamically to the Central Procurement team.

4. **System Administrator:**

- **Access:** Maximum data access.
- **Assignment:** Used by Tech Admins for initial setup, backend imports, and error management.

Phase 4: Master Data Upload Sequence (Module 0)

Once the tables and roles are built, the Tech Admin executes the master data upload in this specific order before users start transacting:

1. **Categories Setup (xr_verticalbudgethead):** Sequence the import for Verticals first, followed by child Budget Heads, then sub-category Sub Budget Heads.
2. **Project Setup (xr_project):** Confirm all projects are active and feature correct Strategy Approval and CPT Approval lookup records.
3. **Budget Base Load (xr_projectbudget):** Import the initial sanctioned records (combining Project + Vertical + Budget Head) with their starting baseline Budget (Allocated Amount) and Pricing .
